

# Stars shining bright above you...

---

As well as launching our bright polished finish on Hot Rolled Plate, October has seen Professional Polishing process a laser cut sheet, intricately cut with a night-sky constellation. Polishing a sheet with such a delicate and unique laser-cut finish is something PPS take in their stride ensuring that a stringent pre-inspection procedure is carried out to make sure the material is free of swarf ready for processing.

Our Bright Polished finish on Hot Rolled plate up to 12mm thick has been very well received, and orders already won despite only launching this finish two weeks ago. If you haven't requested your sample of this finish please contact [Sharron](#) and she will get one out to you by return of post.

We are very proud to announce that we are Finalists in two categories in the inaugural [Birmingham Awards](#); for Business of the Year and our MD, Kirsty Davies-Chinnock, is a Finalist as Business Woman of the Year. The results will be announced at the awards ceremony on the 27th November. Wish us luck!

Finally our count down is on for the arrival of our new multi-head 2 mtr wide dull and silicon polishing machine which is due December 2015. This new line will produce plates up to 20mm thick without the visible banding that is usually associated with such heavy plate.
