

January News from PPS

Happy New Year!

We are back and hugely excited about the fantastic 2016 that we have planned, and we hope you will be a part of it.

New Plant Installation

Our our new multi-head 2000mm wide grinding plate line is being installed during January and we look forward to polishing your Hot and Cold Rolled plate through this machine as soon as it has been fully commissioned. This new line will mean that heavy plate up to 20mm (or even thicker!) thick can be Dull, Silicon and Satin Polished without any banding traditionally associated with material at this size.

Bright Polishing on Hot Rolled Plate

We only launched this finish at the end of last year and it is already proving very popular. Our extensive pre-stages have been designed to remove the majority of surface defects and to minimise the necessary pre-grinding. For your **free sample** of this finish please contact [Adam](#) who will be happy to send this out to you.

Visit us at Subcon 2016

This year we are exhibiting at [The Subcon Show](#) at the NEC in Birmingham on the 7th > 9th June. We will have lots of samples of a variety of different finishes on display (and to take away) and it would be great to see you there. Our stand number is E22 (we're right by the main entrance) and we will be sending out information on free registration nearer to the date.

Architectural Flat Bar Finishing

We produce a beautiful 1K finish on flat bar and sawn plate suitable for mullions, balustrade uprights and other architectural applications. With a uniform finish of less than 0.5µm this is smooth, silky, and with a lustre that shows stainless steel at it's very best.

Sample Packs

If you have not requested one of our rather gorgeous new sample packs then please get in touch with [Sharron](#) and she will arrange to send this out to you. We have a *very* limited quantity of our Sample Calendars remaining, so be quick if you would like one of these included in the pack.

How Can we Help?

Don't hesitate to contact us for any information.
